

FUNCTIONAL · AESTHETIC · REGENERATIVE GYNAECOLOGY

# Tissue-Specific Intimate Medicine

*Indication-driven. Biologically rational.*

**DR. NADEEN KABBOURA**

Obstetrics & Gynaecology · Aesthetic and Regenerative Medicine

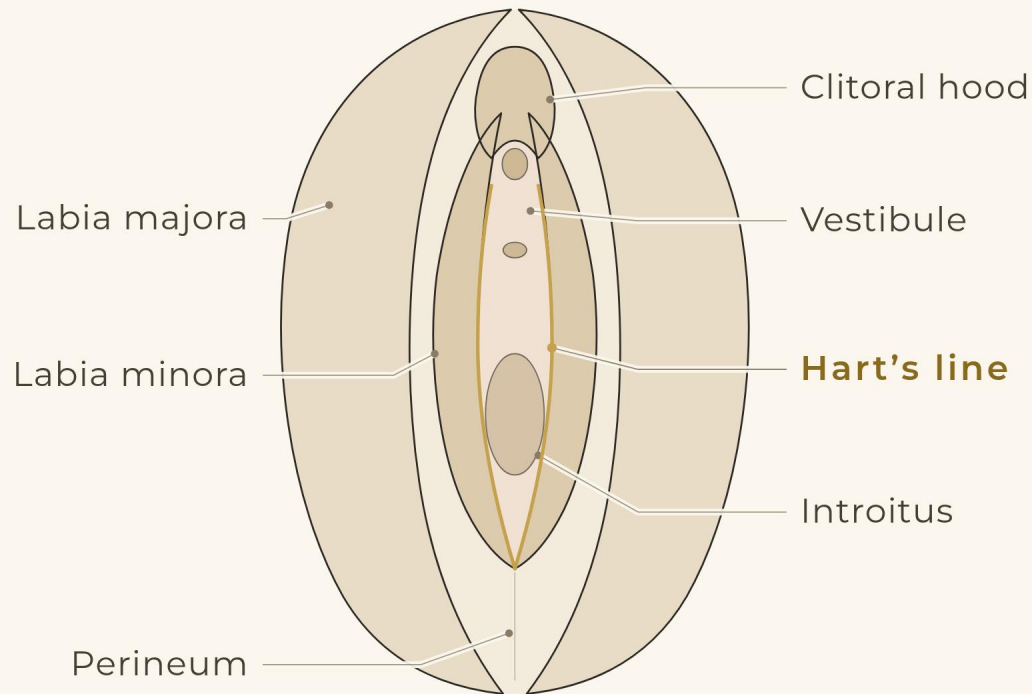

CONFERENCE · SESSION · DATE

# Variation is not pathology.

*Treat indication — not expectation.*

# One region. Distinct tissue biology.

Keratinised skin  
**laterally**

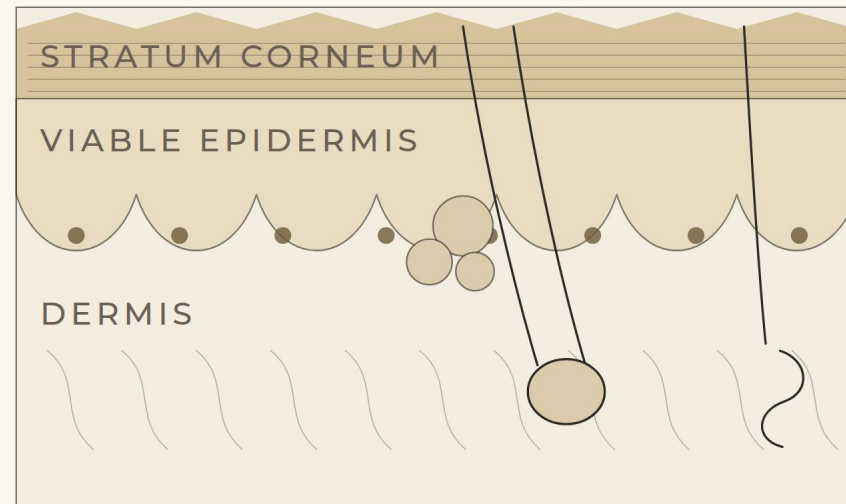

Non-keratinised  
mucosa **medially**

**Hart's line** is the  
boundary

# Mucosa $\neq$ facial skin

## KERATINISED SKIN

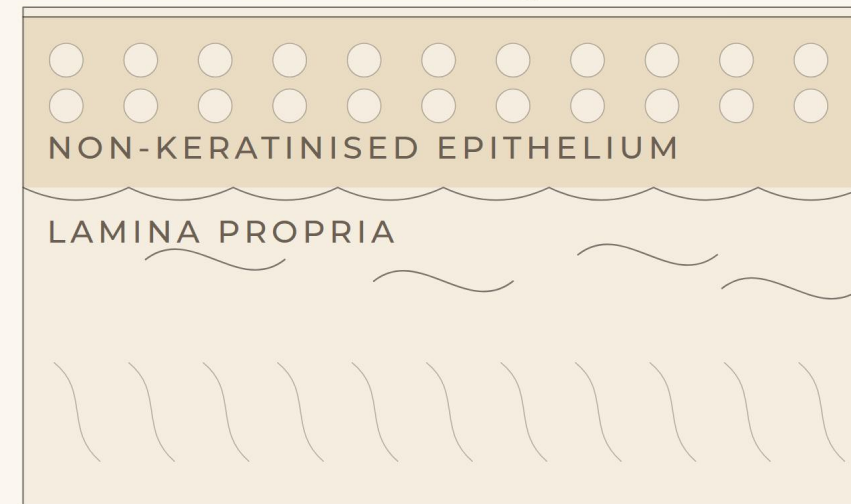

Labia majora · ectodermal origin

Thick barrier · adnexa · low permeability

## NON-KERATINISED MUCOSA

Vestibule · endodermal origin

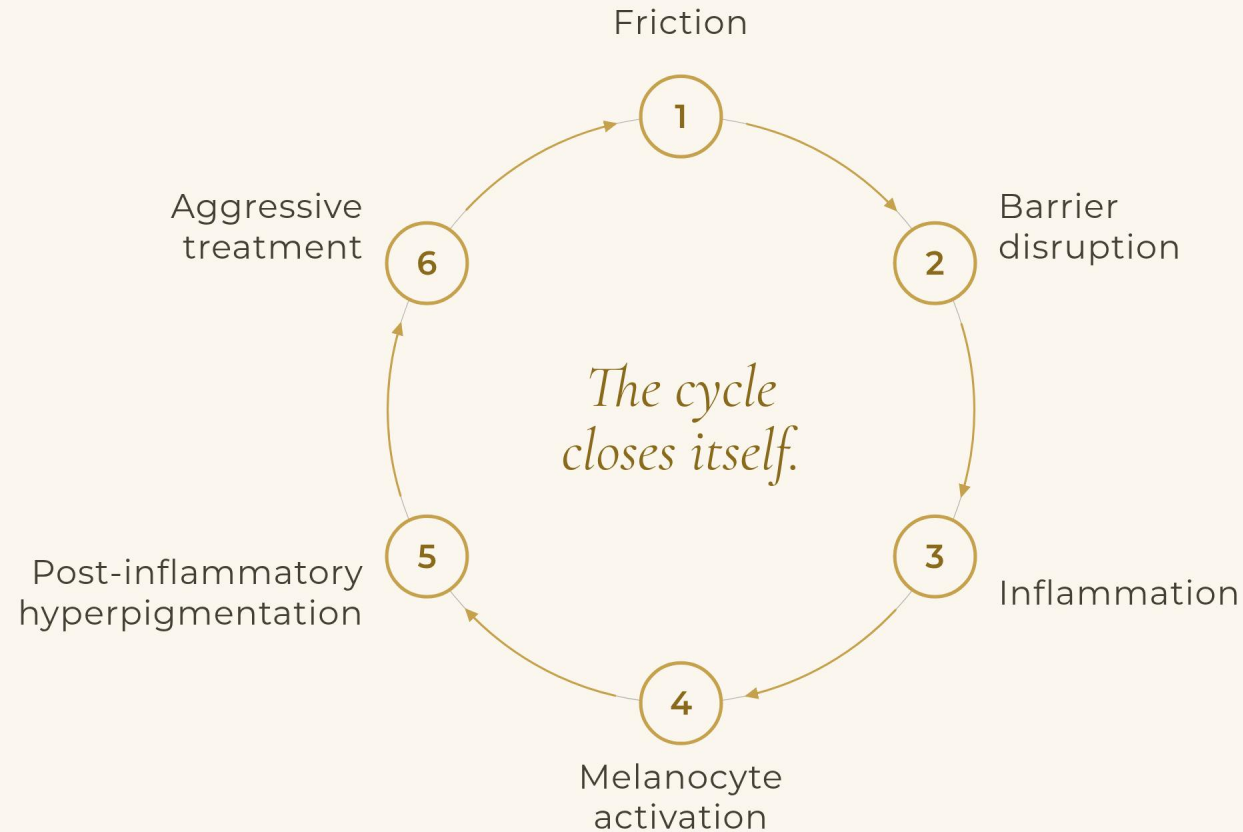

No corneum · no adnexa · high permeability

No stratum corneum · no adnexa · percutaneous absorption several-fold higher than forearm

## MECHANISM

# The inflammation–pigment cycle

*Escalation feeds the cycle.*

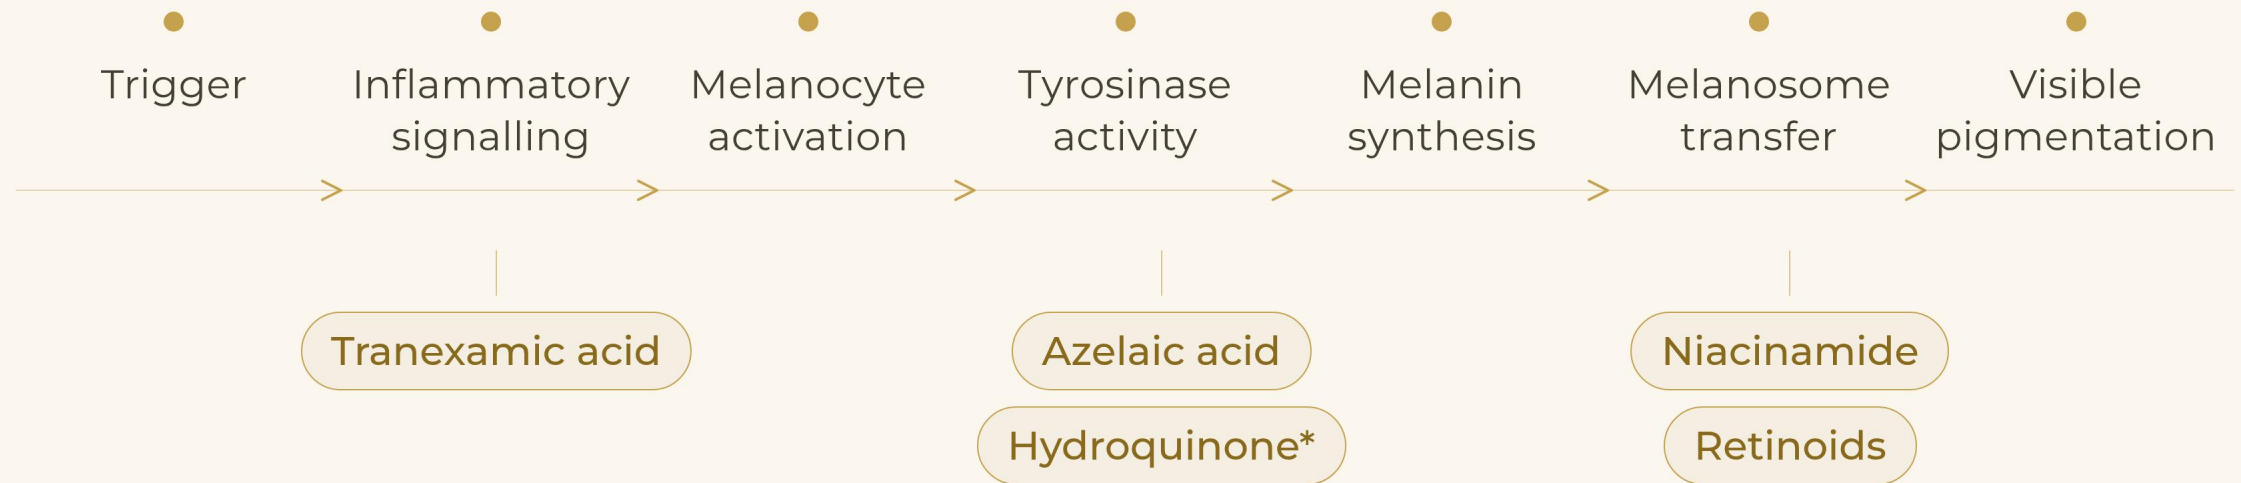

Correct the driver first. Pigment is the readout, not the disease.

# Assess before you treat

## PIGMENT

# Target the mechanism, not the shade

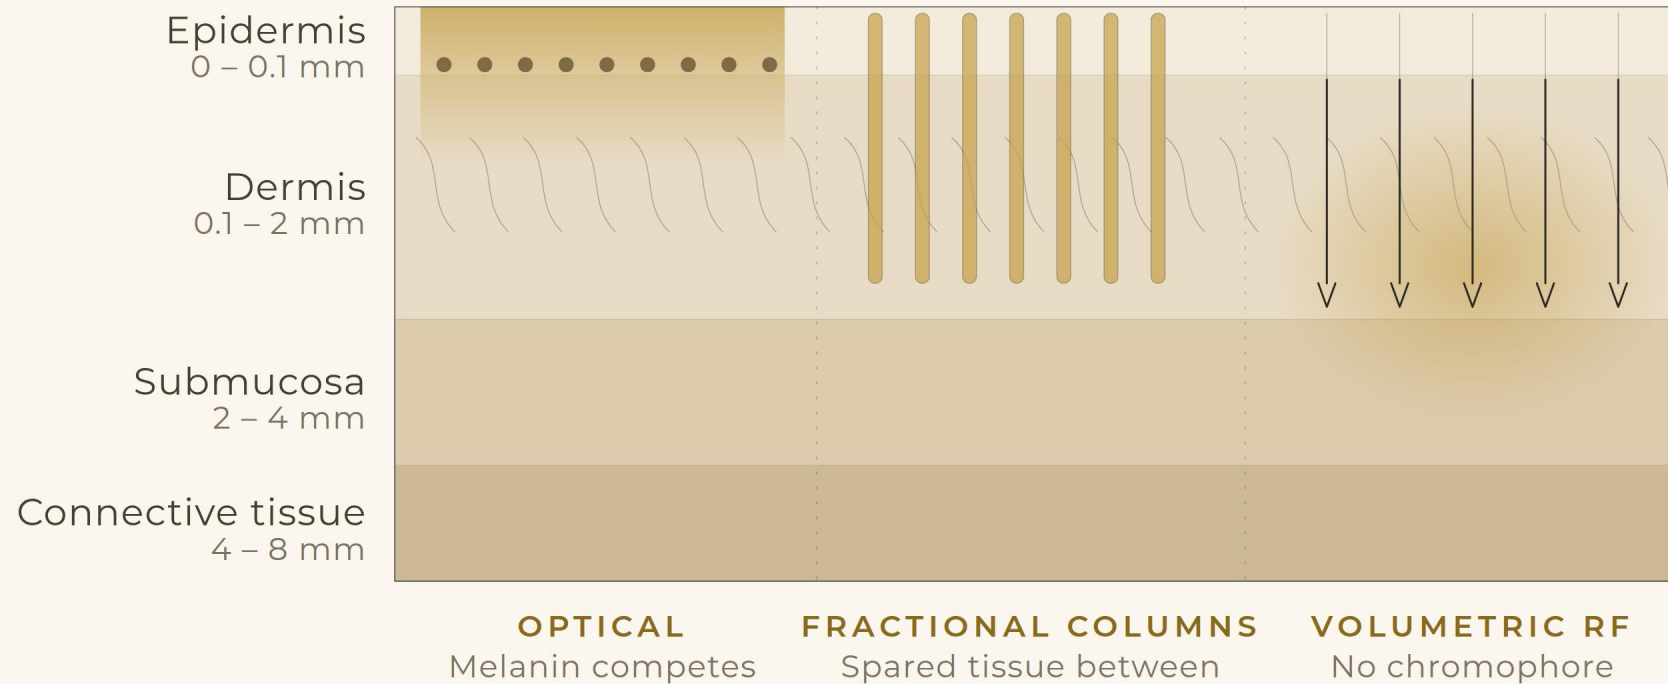

Dermatological evidence is established · vulvar application is anatomical extrapolation

\* prescription-only in several jurisdictions · exogenous ochronosis risk

## ENERGY

# Select energy by tissue target

Melanin is a competing chromophore — optical risk rises steeply in Fitzpatrick IV–VI

## SEQUENCE

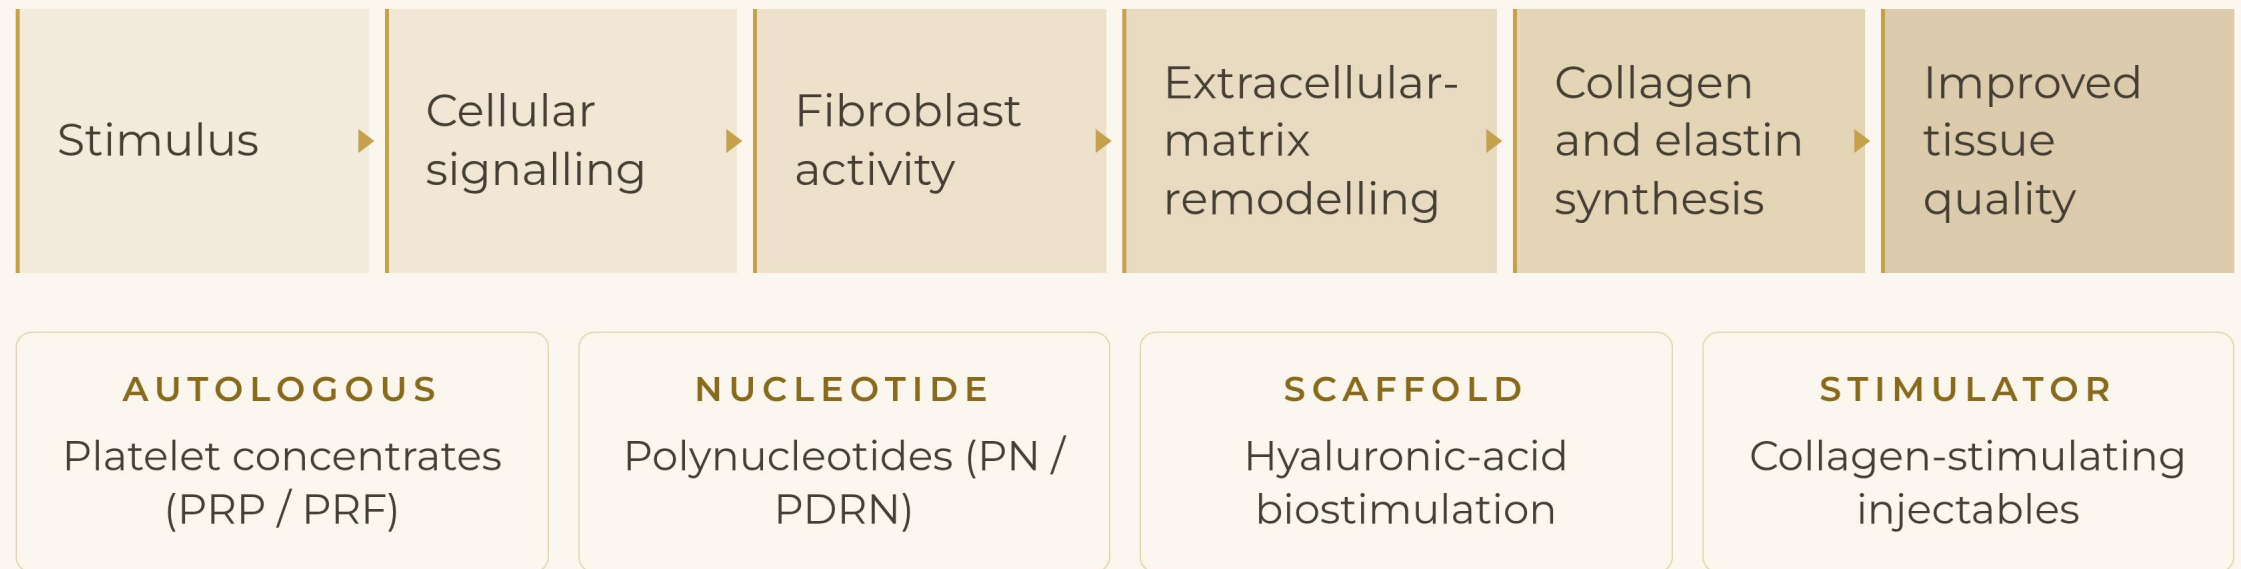

# Therapeutic hierarchy

---

*An inflamed foundation cannot support escalation.*

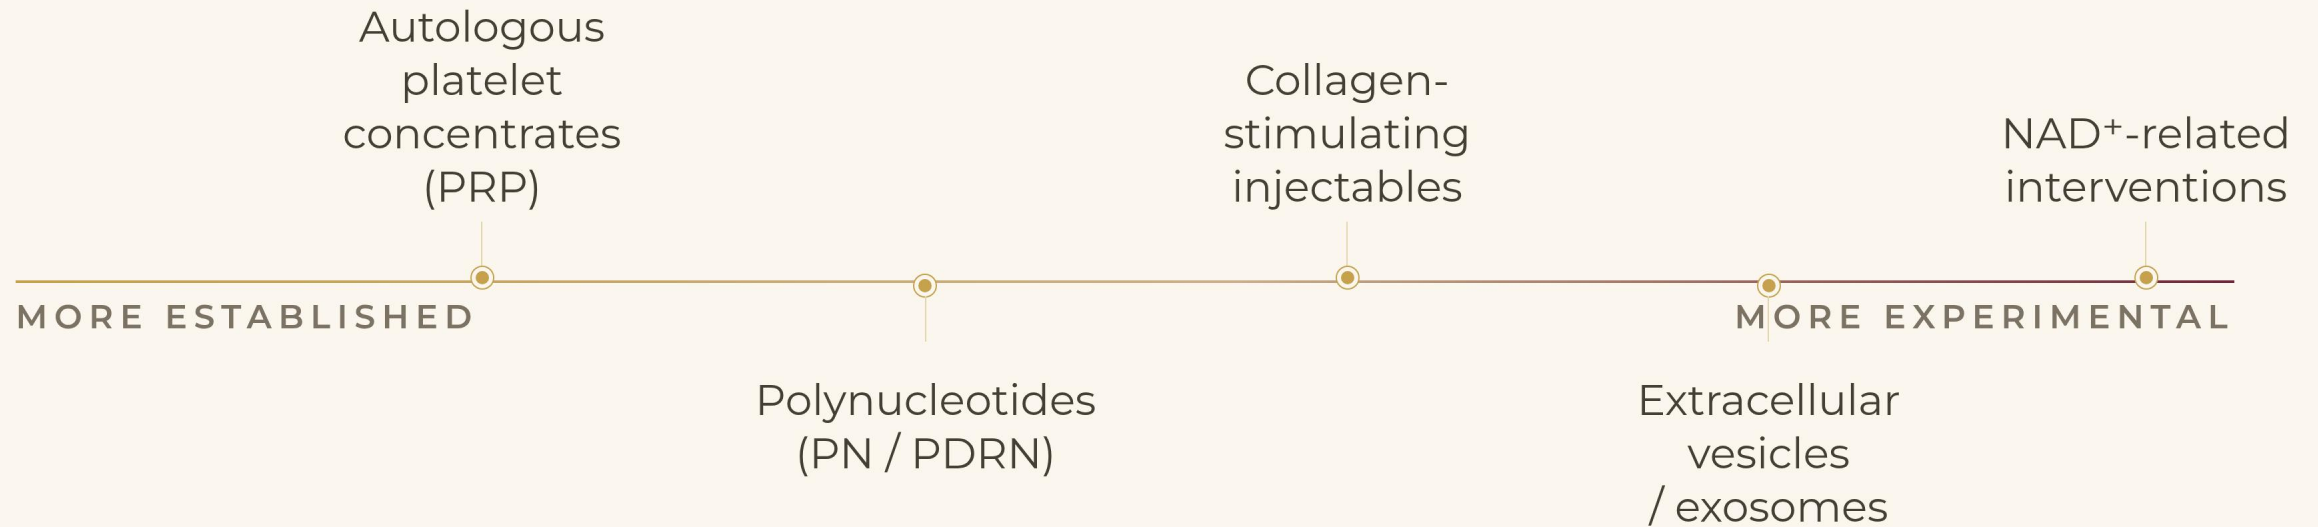

# The cascade, not the product

*Evidence varies by indication and anatomical site.*

## EVIDENCE

# Where the evidence actually sits

*Biological rationale does not equal clinical validation.*

# The Kabboura Clinical Framework

---

*Escalate only from  
a quiet foundation.*

Stage-gated and  
indication-led. Each stage is  
re-assessed before the next  
is entered.

An organising heuristic — not a  
validated protocol.

## CONCLUSION

# Clinical take-home

---

01 Diagnose before treating

---

02 Match treatment to tissue

---

03 Escalate according to evidence

---

*Treat biology — not trends.*

---

THANK YOU
